

SEE FRAME[®] FOR VISION
SIMPLE-ECONOMICAL-EFFECTIVE

MODULAR T-SLOT FRAME SYSTEM FOR VISION METROLOGY

Don't Cover Your Glass - Frame It!

Get the modular video fixture system designed by experienced vision metrologists.

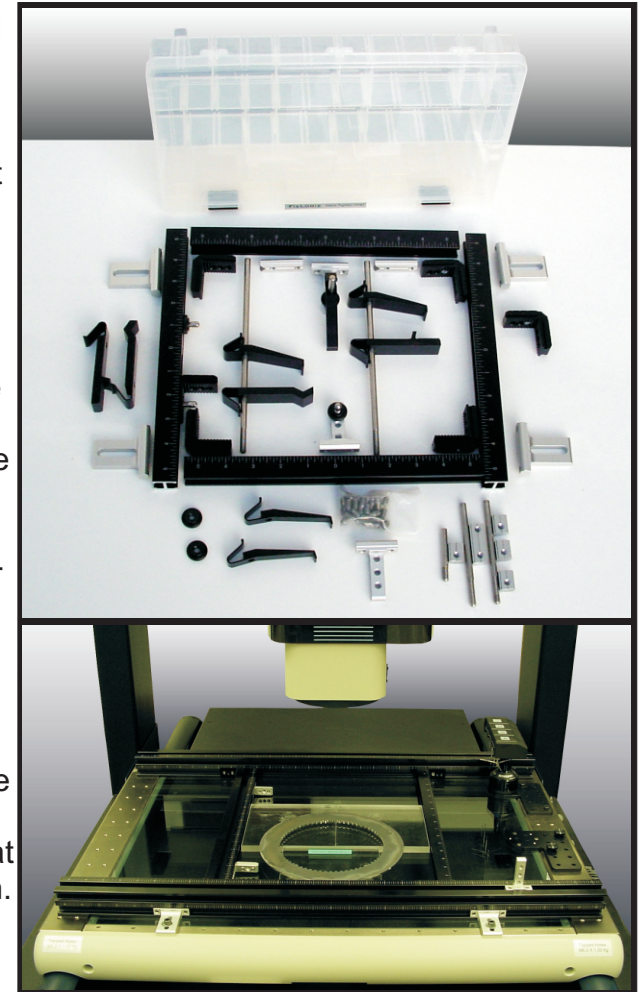

Video CMMs are designed with an optical quality glass stage on which to mount parts. It follows that best practice is to fixture the parts on the glass-surface whenever possible. The SEE Frame is designed to work with the glass stage of Video CMMs... not obscure it!

Linear T-slot frame with laser engraved reference scales for easy repeat setups. A new t-nut 2-axis mounting system provides an easy retrofit to a wide variety of popular optical CMM models and sizes.

Economical: the t-slot frame system is a low-cost-high functionality solution. Linear frames can be stacked or mounted vertically for 3D setups.

FixLogix components introduce new technology. Our self-wedging clamps offer near zero clamping force. Sliding t-nut tooling- blocks provide an infinite variety of fixture solutions. Even the corner-joiners for our frame are dual purpose, providing ridges that allow backlighting to illuminate edges for inspection.

Fixtures for vision inspection are application specific. The SEE Frame is a flexible delivery system, to position components where you need them. We produce standard and custom fixture solutions to meet customer requirements.
